MANOJ KUMAR P M

ASSOCIATE PRODUCT MANAGER · AI PRODUCTS

Bangalore, India | manojkumarpm651@gmail.com | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Associate Product Manager focused on AI products, with an MCA and a background in machine learning, full-stack development, and Level-3 enterprise support. Picks problems with a clear "why now", sets scope boundaries that keep AI products safe and compliant, and pairs every success metric with a guardrail so growth never outruns data quality. Two end-to-end AI product case studies, in US healthcare navigation and Indian SMB retail, each taken from validated problem discovery to a working build.

AI PRODUCT PORTFOLIO — FEATURED CASE STUDIES

Northstar — B2B2C AI Care-Navigation Companion (US Healthcare) *Case Study · 2026*

Live Demo · Code & Case Study

- Grounded the problem in peer-reviewed evidence of post-diagnosis overwhelm and timed the bet to CMS's Jan-2024 reimbursement of Principal Illness Navigation, which made navigation billable for providers.
- Set a *"navigation, not diagnosis"* scope aligned to CMS's non-clinical definition, keeping the product off the FDA device path.
- Required a deterministic emergency gate (model bypassed) that logs every red-flag escalation for audit in under a second.
- Built and deployed at a 96/100 Lighthouse accessibility score, where about two-thirds of healthcare sites fail WCAG basics.

Snap-to-Stock 2.0 — AI Vendor-Bill-to-Inventory (Vyapar, Indian SMB Retail) *Case Study · 2026*

Code & Case Study

- Analyzed 10+ real purchase bills firsthand and 12 verified user reviews across 6 platforms (Reddit, G2, Capterra, App Store, Software Advice, Techjockey) to map the highest-friction steps, set against the April-2026 GST rule that lets one mis-entered invoice block input tax credit.
- Redesigned purchase entry as **Snap-to-Stock**: photo of a distributor bill → structured line items → human review → commit, collapsing 80–120 manual taps per bill into a single Gemini Flash vision call, chosen after Sarvam lagged in my own tests on the same bills.
- Prioritized with an impact-vs-effort matrix and defined the success metric as weekly scan-committed line items per business, read against a *"confidently-wrong committed"* rate, so growth counts only when data integrity holds, and designed an A/B test in which that guardrail holds veto power.
- Added a human-verify layer after a live test caught the model confidently inventing an 18% GST rate never printed on the bill.

CORE COMPETENCIES

Product Management: AI product discovery & scoping, PRD / spec writing, roadmapping, GTM, responsible-AI & risk documentation, regulatory-aware design, Agile, cross-functional communication

AI & Automation: LLM application design (Gemini / GPT / Claude), retrieval & RAG design, prompt design, no-code / low-code builds (Make.com, Lovable, Supabase, Airtable)

Data & Engineering: Python, SQL / MySQL, Tableau, data visualization, relational DB design, Java / Spring Boot, Dynamics BC

Domains: SMB retail, GST & inventory workflows (India); post-diagnosis patient navigation & CMS reimbursement (US healthcare)

Soft Skills: Cross-functional collaboration, stakeholder communication, problem-solving, analytical thinking, adaptability, ownership

PROFESSIONAL EXPERIENCE

L3 Technical Support Intern — Incadea India Private Limited *Feb 2023 – Jul 2023*

- Owned Level-3 escalation triage, prioritizing fixes by their business impact on clients' live dealership operations and partnering with engineering to weigh trade-offs before shipping version changes.
- Coordinated across L2, Support, Development, and Management teams to resolve 5–6 complex escalations — each a one-to-two-week effort and together ~20–25% of the team's total escalation load — building strong DMS domain fluency.
- Spotted a recurring OS-update failure as a systemic pattern rather than isolated tickets — Windows updates were changing device identifiers and breaking server connectivity and remote access — then resolved it across 15–20 HQ-assigned dealerships and turned the diagnosis into a reusable knowledge-base fix for future cases.

ADDITIONAL TECHNICAL PROJECTS

- **Caketopia POS & Inventory System:** MySQL database and Spring Boot app for real-time stock, dispatch, and order tracking.
- **Email Spam Classifier:** Python classifier at 90%+ accuracy; owned preprocessing, model selection, and evaluation.

EDUCATION, CERTIFICATIONS & PUBLICATIONS

Future-Ready Product Management with Applied AI — Masai School × IIT Roorkee *Completed Sept 2026*

Capstone 9.4/10 · Overall CGPA 7.15 · Modules: discovery, solution design, GTM, AI PM workflows, no-code AI builds, analytics

Master of Computer Applications (MCA) — New Horizon College of Engineering *CGPA 8.35*

Bachelor of Computer Applications (BCA) — New Horizon College, Kasturinagar *CGPA 8.37*

Google Data Analytics Professional Certificate — Coursera *In progress*

NPTEL: The Joy of Computing using Python · Operating Systems · Database Management Systems

Publication: Co-author, *"Machine Learning for Identification of Immedicable Renal Disease,"* ICSSIT-2023.
